About Me
Software & Web Developer

       I have been developing since 2011 and what started as an interest, the enticement of technology, grew to entangle and encase me within it. With each day the technologies that surround us advance one step further. It is my longing to advance with it and be at the forefront of that advancement. I yearn to innovate along side those who delicately craft the ever changing mediums that shape our lives and allow us to connect. It is my life goal to develop meaningful, clean and scalable software that brings joy to others!
